OCS Worldwide selects Ford as 2008 fleet partner

In July 2008, OCS Worldwide embarked upon the implementation of a new fleet of 38 Ford Transits to include 260 SWB's, 350 MWB's, 350 LWB's and Jumbo's.

These vehicles have additional safety features to include ESP, anti-hijacking device and reversing sensors, which assists us with our ongoing attempts to lower our incident/accident risks. Not only does this allow us to negotiate lower insurance premiums but this also helps our Company to maintain our Duty of Care obligations whilst protecting the Health and Safety of the General Public and our drivers.

These liveried vehicles offer a more professional image and, with the car-like interior, our drivers find these vehicles more comfortable and easy to use.

The new Ford Transit is equipped with the latest common-rail diesel engine offering lower class-leading levels of emission and fuel economy. This helps OCS Worldwide to meet our environmental targets.
